

Quality and the environment – key characteristics of Tikkurila products

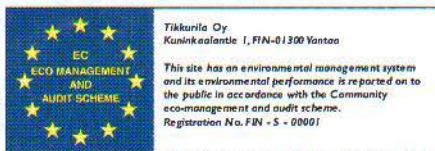

Since 1991 Tikkurila products have been backed by an ISO 9001 standard quality system. The elements contributing to quality are our skilled personnel, strong product development, highly automated production technology, and fast, reliable delivery.

Tikkurila combines environmental aspects, health and safety with quality issues in a single system. Tikkurila Oy's way of handling environmental questions conforms with BS 7750. The company was accredited in accordance with this standard in 1994, the first paint factory in the world to receive this distinction.

Tikkurila's in-house environmental programme is based on the chemical industry's international 'Responsible Care' programme for the environment, health and safety.

In 1996 Tikkurila Oy received registration under the European Union's Eco-Management and Audit Scheme (EMAS) – the first company in Finland to do so.
